SNACK SQUAD

CHAPTER-1

INTRODUCTION

1.1 Overview

In our current reality where time is a significant product, individuals are dependably watching out for helpful and effective arrangements. Snacking is one industry that has seen a rise in demand for such solutions. Whether you're in a bustling business day or partaking in a sluggish end of the week at home, eating is something we as a whole enjoy. But it can be hard to find the time and energy to go shopping for your favourite snacks.

Welcome to our app for snack ordering and delivery. Customers will be able to order and receive their favourite snacks without having to leave the comfort of their homes with the help of this app, which is designed to be both convenient and effective. With only a couple of taps on your Smartphone, you can peruse a broad menu of delightful tid bits and have them conveyed right to your doorstep quickly.

Customers can quickly register and begin placing orders for their favourite snacks right away thanks to our user-friendly and straightforward app. The registration procedure is straightforward and only requires basic information like your name, email address, and password. Customers can look through the main page, which include a wide range of snacks like popcorn, sandwich, burger, once they register.

Our app is made to offer a delivery service that is both dependable and effective. We have collaborated with neighbourhood conveyance organizations to guarantee that clients accept their snacks in an ideal and helpful way. Through the app, customers can monitor their order status in real time, ensuring that their snacks are on their way.

Modules:

1. Registration Page – Here the user create they accounts
2. Login Page – Here the user login using they account

3. Admin Page – Here the administrator can see amount of request and conveyance area
4. Ordering Page – Here the user can order snacks by quantity and specify the delivery location
5. Snacks Page – Here the user can scroll through wide variety of snacks and order they favourite snacks

1.2 Purpose

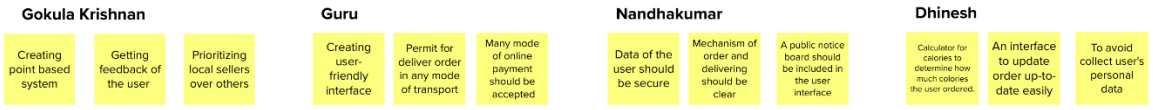
The snack ordering and delivery app was created to meet the growing demand in the snacking industry for convenient and effective solutions. Customers will be able to order and receive their preferred snacks from the convenience of their own homes with the help of the app, which is intended to facilitate a streamlined and stress-free snacking experience. Customers will be able to easily navigate the menu, customize their orders with the app's user-friendly interface. Additionally, the app aims to offer a dependable and effective delivery service, ensuring that customers receive their snacks promptly and in a way that is convenient for them. The app is anticipated to increase customer satisfaction and loyalty while also providing a valuable revenue stream for the company. By offering customers a one-of-a-kind and satisfying experience, the snacks ordering and delivery app aims to gain a competitive advantage in the snacks delivery market. In the end, the app's goal is to offer customers a profitable business opportunity while also making snacking more accessible and enjoyable for them.

CHAPTER-2

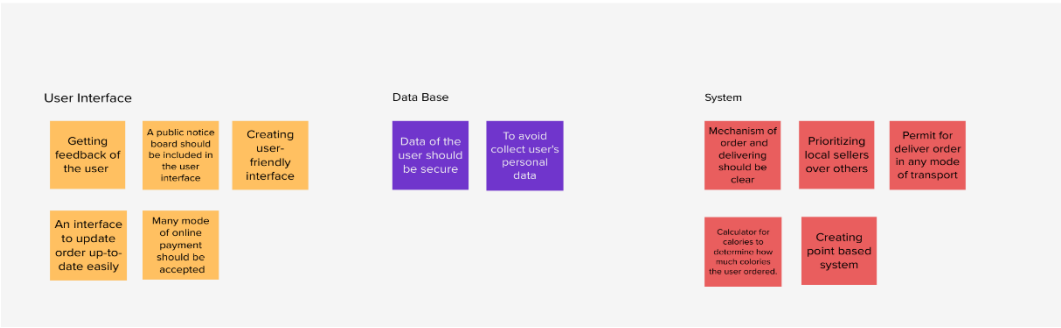
PROBLEM DEFINITION AND DESIGN THINKING

2.1 Empathy Mapping

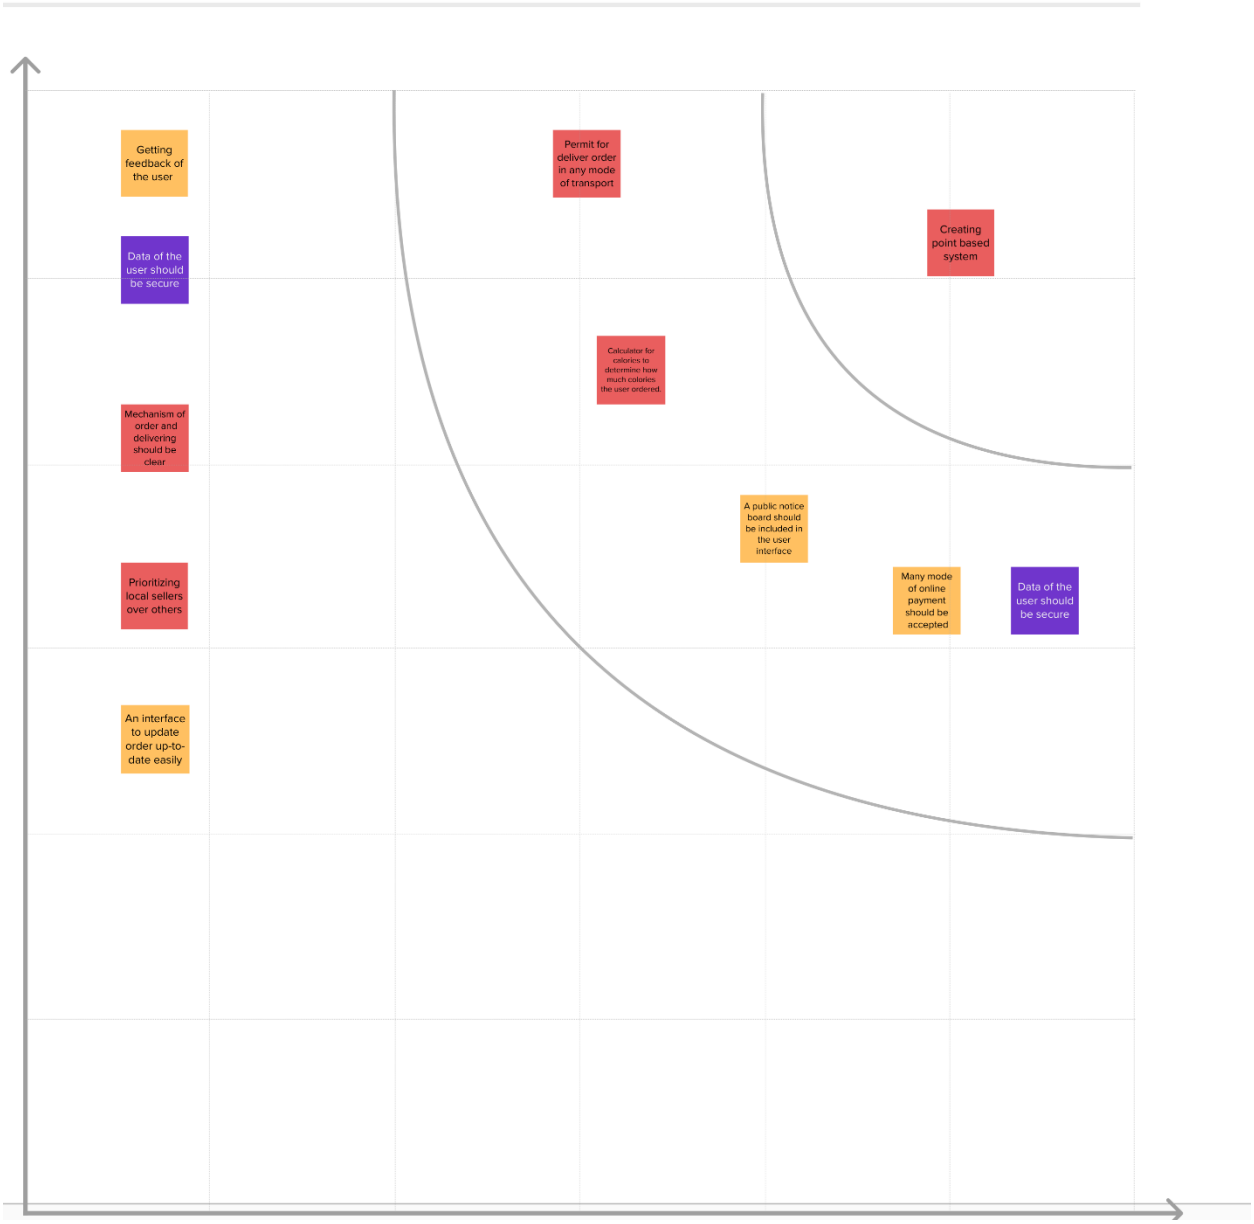
Brain Storming



Group ideas



Prioritize



Getting feedback of the user
Data of the user should be secure
Mechanism of order and delivering should be clear
Prioritizing local sellers over others
An interface to update order up-to-date easily
Permit for deliver order in any mode of transport
Calculator for calories to determine how much calories the user ordered.
Creating point based system
A public notice board should be included in the user interface
Many mode of online payment should be accepted
Data of the user should be secure

2.2 Ideation & Brainstorming Map

CHAPTER- 4

PROPOSED SYSTEM

4.1 Advantages

1. Convenience: Customers can order food from anywhere and at any time with snacks ordering, making it very convenient for them.
2. Time-saving: Clients can save a great deal of time by requesting food online as opposed to going to an actual store.
3. Customization: Customers' overall experience is enhanced when online ordering systems let them tailor their orders to their preferences.
4. Error reduction: Online ordering makes the ordering process more accurate and reduces the likelihood of miscommunication-related errors.
5. Increase in sales: Because customers are able to place orders online from any location, sales rise and revenue rise as a result.

4.2 Disadvantages

1. Problems with the technology: Orders can be delayed or canceled when online ordering systems encounter technical issues.
2. Reliance on innovation: The success of online ordering systems is dependent on the technology's dependability, which can be detrimental in the event of its failure.
3. Personal interaction is limited: There is less personal interaction with customers when they order online, which can hurt their experience.
4. Security concerns: If not properly secured, online ordering systems may result in customer data theft or misuse, posing security risks.
5. An additional cost: The initial investment in technology and staff training required to implement an online ordering system can be costly.

CHAPTER- 5

APPLICATIONS

The Snacks Ordering app can be used in a lot of different fields. The app can be used by businesses in the food and beverage industry to offer their products to customers in a way that is both convenient and effective. Customers are able to place orders and make payments directly through the app, which can be customized to feature the products of a specific business.

The Snacks Ordering app can be integrated into existing platforms in the e-commerce industry to offer snack products as an additional product category, particularly for platforms that focus on food and beverage products. The app can also be used by retail stores to sell snacks to customers, and convenience stores can offer more snack options.

Corporate workplaces can utilize the application to furnish their representatives with an assortment of nibble choices. Employees can place orders and have the snacks delivered directly to their office using the app, which can be customized to feature the products of a specific company or a variety of snack options from various brands.

Occasion coordinators can likewise use the Bites Requesting application to offer nibble items to participants. The app can be made to show products from a specific brand or a variety of snack options from different brands. This lets people order snacks and have them delivered to the event location.

Food truck owners can use the snacks ordering app to sell snacks and food to customers. The application can assist them with advancing their business, deal with their orders and installments, and speak with clients.

CHAPTER- 6

CONCLUSION

It is possible to draw the conclusion that the goal of the project was to create a user-friendly online ordering platform for popular snacks.

Android Studio and Kotlin were the technology and Language utilized during the development process. The agile development methodology was followed by the development team, allowing them to complete the project on time and within budget.

The Learning process is tough. The platform used to learn was naanmudhalvan. Working on this project improved team spirit between teammates. Improved the knowledge about kotlin language and the basic idea of how to use android studio. Slight knowing of github and how it works.

Improved the ideation, time management, typing skills and an outline of how a project works. Achieved many things and experienced pleasure of working in a project

The Snacks ordering app is a successful and useful tool for people who love snacks and want to order their favorite snacks online. The app's features and capabilities make it simple to use, and the development process adhered to industry best practices, resulting in a high-quality final product.

CHAPTER- 7

FUTURE ENHANCEMENT

1. Groups: An group chat room where the customer and they partner recommend they favourite snacks.
2. Rewards programs: A program that offers discounts or free products to repeat customers could be included in the app.
3. Recommendations: The application could utilize client request information to give customized nibble proposals in view of their past orders or interests.
4. Online entertainment incorporation: Customers could be able to share their orders or reviews with friends and followers by integrating the app with social media platforms like Facebook , Instagram etc.
5. Tracking in real time: Customers would be able to see when their snack order is being prepared, when it is on its way for delivery, and when it has been delivered if the app included real-time tracking.
6. Voice control: Customers might be able to place orders through the app with the help of voice commands if it includes voice recognition technology like Google assistant and Amazon’s Alexa.
7. Chatbot powered by AI: An AI-powered chatbot could be included in the app to answer common snack-related questions and provide customer support.
